                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              GENERAL INFORMATION:

GENERAL INFORMATION:

APPLICANT: Hall, Barry G.

TITLE OF INVENTION: METHOD OF DETERMINING EVOLUTIONARY POTENTIAL OF MUTANT

TITLE OF INVENTION: EFFICACY

TITLE OF INVENTION: EFFICACY

FILLS REFERENCE: 1766/60851

CURRENT APPLICATION NUMBER: 06/149,813

PRIOR FILLING DATE: 2000-08-18

PRIOR PILLING DATE: 1099-08-19

PRIOR PILLING DATE: 1099-08-19

PRIOR PILLING DATE: 1099-08-19

PRIOR PILLING DATE: 1090-08-19

PRIOR APPLICATION NUMBER: 60/149,813

PRIOR PILLING DATE: 1099-08-19

SOFTWARE: PatentIN Ver. 2.1

SOFTWARE: PATENTIN Ver. 2.1

SOFTWARE: DNA

ORGANISM: Artificial Sequence

FEATURE:

OTHER INFORMATION: DACSE2

The patent discloses methods and compositions to modulate the expression of a target gene in plant cells. The method involves providing plant bells with a zinc finger protein (ZFP) which is capable of specifically binding to a target nucleotide sequence or its complementary strand within a target gene and allowing the ZFP binding to the target cells is modulated. The ZFP and fusions of the ZFP proteins are useful for modulating or regulating gene expression of the target gene in the plant for modulating or regulating gene expression and metabolic pathways in plants. The ZFP, fusion proteins and methods are useful in plant and assircultural technology. The method is useful particularly for treating a disorder in the plant cells, where the disorder is associated with abnormal expression of the target gene. The present DNA sequence is the partial sequence of pMal-mi and ZFPmi DNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   New zinc finger proteins, useful for modulating or regulating gene expression and metabolic pathways in plants, e.g. for treating in the plant cells a disorder that is associated with abnormal expression of the

The patent discloses methods and compositions to modulate the expression of a target gene in plant cells. The method involves providing plant cells with a zinc finger protein (ZFP) which is capable of specifically binding to a target nucleotide sequence or its complementary strand within a target gene and allowing the ZFP binding to the target nucleotide sequence, where the expression of the target gene in the plant culls is modulating or regulating gene expression of the ZFP proteins are useful for modulating or regulating gene expression and metabolic pathways in plants. The ZFP, fusion proteins and methods are useful in plant and agricultural technology. The method is useful particularly for treating a disorder in the plant cells, where the disorder is associated with abnormal expression of the target gene. The present DNA sequence is the patrial sequence of pMal-m2 and ZFPm2 DNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ô
                                                                                                                                                                                                                                                                                                                          New zinc finger proteins, useful for modulating or regulating gene expression and metabolic pathways in plants, e.g. for treating in the plant cells a disorder that is associated with abnormal expression of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        240
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          300

The patent discloses methods and compositions to modulate the expression of a target gene in plant cells. The method involves providing plant cells with a zinc finger protein (ZFP) Which is capable of specifically binding to a target nucleotide sequence or its complementary strand within a target gene and allowing the ZFP binding to the target cells is modulated. The ZFP and fusions of the ZFP proteins are useful for modulating or regulating gene expression of the ZFP proteins are useful for modulating or regulating gene expression and metabolic pathways in plants. The ZFP, fusion proteins and methods are useful in plant and agricultural technology. The method is useful particularly for treating a disorder in the plant cells, where the disorder is associated with abnormal expression of the target gene. The present DNA sequence is the partial sequence of pMal-Ap3 (APETALA3) and ZFPAp3 DNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   New zinc finger proteins, useful for modulating or regulating gene expression and metabolic pathways in plants, e.g. for treating in the plant cells a disorder that is associated with abnormal expression of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Gaps

The patent discloses methods and compositions to modulate the expression of a target gene in plant cells. The method involves providing plant cells with a zinc finger protein (EFP) which is capable of specifically binding to a target nucleotide sequence or its complementary strand within a target gene and allowing the ZFP binding to the target nucleotide sequence, where the expression of the target gene in the plant cells is modulated. The ZFP and fusions of the ZFP proteins are useful for modulating or regulating gene expression and metabolic pathways in plants. The ZFP, fusion proteins and methods are useful in plant and agricultural technology. The method is useful particularly for treating a disorder in the plant cells, where the disorder is associated with abnormal expression of the target gene. The present DNA sequence is the partial sequence of pMal-m4 and ZFPPMA DNA New zinc finger proteins, useful for modulating or regulating gene expression and metabolic pathways in plants, e.g. for treating in the plant cells a disorder that is associated with abnormal expression of target gene. Example 4; Page 145-147; 156pp; English P-PSDB; AAE06004

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          of a target gene in plant cells. The method involves providing plant cells with a zinc finger protein (ZFP) which is capable of specifically binding to a target nucleotide sequence or its complementary strand within a target gene and allowing the ZFP binding to the target on nucleotide sequence, where the expression of the target gene in the plant cells is modulated. The ZFP and fusions of the ZFP proteins are useful for modulating or regulating gene expression and metabolic pathways in plants. The ZFP, fusion proteins and methods are useful in plant and agricultural technology. The method is useful particularly for treating a disorder in the plant cells, where the disorder is associated with

                                                                                                                                                                                                                                                                                                                                                                                                                            The present sequence encodes human Cdc25C phosphatase, and was expressed in Escherichia coli. It is used to make fusion proteins with Escherichia coli maltones binding protein (MBP). The specification describes fusion proteins of MBP and one of Cdc 25B1, 25B2, 25B3 and 25C. Cdc phosphatases are involved in activation of cyclin-dependent kinases (CDK) that control cell division. The fusion proteins are used to identify modulators of the specified human Cdc phosphatases, potentially useful for regulation of cell division. They are also for studying physiological or physiopathological activities of Cdc phosphatase
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  120

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             cdc25 Phosphatase inhibiting medicaments, useful e.g. for treating tumor diseases, viral infections, neurodegenerative disease or alopecia, containing new or known aryl-substituted amines.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             disorders
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The present sequence represents pMAL-Hscdc25C, a plasmid encoding human Cdc25C phosphatase. The specification describes the use of aryl-substituted secondary or tertiary amines for the production of medicaments for inhibiting Cdc25 phosphatases, especially Cdc25C phosphatases. The amines of the invention are used for treating spontaneous alopecia or alopecia induced by exogenous products or radiation. They are also used for treating tumoural or non-tumoural proliferative diseases, parastic diseases, viral infections, neurodegenerative diseases or myopathy. Examples of non-tumoural proliferative diseases are e.g. angiogenesis, psoriasis or restenosis. The amines are also useful for inhibiting the proliferation of microorganisms (especially yeasts) and in the treatment of all disorders conventionally treated with vitamin K or its derivatives

The invention relates to a purified P30 antigen (I) chosen from 3 fully defined Toxo30de12C and ToxoP30 MIX1 sequences, having 1-6 amino acids added to the C-terminus of the amino acid sequence of Toxo30de12C P30 antigen sequence, or comprising an amino acid sequence in which at least one of the five C-terminal cysteine amino acid sequence in amino acid sequence of Toxo30de13C P30 antigen sequence is substituted amino acid sequence of Toxo30de13C P30 antigen sequence chosen from MBP-Toxo30de13C(52-30aa) MBP-Toxo30de14C(52-294aa) and MBP-Toxo30miX1 antibodies to Toxoplasma gondii in a test sample, which involves contacting the test sample suspected of containing the IgM antibodies antibody complexes. The presence sequence represence of [I] I may be antibody complexes. The presence sequence represence of (I)/IgM antibody complexes. The presence represents DNA encoding a MBP-ToxoP30 fusion protein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            120

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The invention relates to a purified P30 antigen (1) chosen from 3 fully defined Toxo30del3C, Toxo30del2C and ToxoP30 MIX1 sequences, having 1-6 amino acids added to the C-terminus of the amino acid sequence of Toxo30del2C P30 antigen sequence, or comprising an amino acid sequence in which at least one of the five C-terminal cysteine amino acids of the amino acid sequence of Toxo30del3C P30 antigen sequence is substituted with alanine, or comprising the amino acid sequence consent from MBP-Toxo30del3C(52-300aa), MBP-TOXO30del4C(52-294aa) and MBP-TOXO30MIX1 fusion proteins. (1) is useful for detecting the presence of IgM antibodies to Toxoplasma gondii in a test sample, which involves contacting the test sample suspected of containing the IgM antibodies with a composition comprising (1) and detecting the presence of (1)/IgM antibody complexes. The present sequence represents DNA encoding a MBP-TOXOP30 fusion protein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ô
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    120

The invention relates to a purified P30 antigen (1) chosen from 3 fully defined Toxo30de13C, Toxo30de12C and ToxoP30 MIX1 sequences, having 1-6 amino acids added to the C-terminus of the amino acid sequence of Toxo30de12C P30 antigen sequence, or comprising an amino acid sequence in which at least one of the five C-terminal cysteine amino acids of the with alamine, or comprising the amino acid sequence in with alamine, or comprising the amino acid sequence chosen from MBP-Toxo30de13C(52-300aa), MBP-Toxo30de14C(52-294aa) and MBP-Toxo30MIX1 fusion proteins. (1) is useful for detecting the presence of IgM antibodies to Toxoplasma gondii in a test sample, which involves contacting the test sample suspected of containing the IgM antibodies
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Novel purified polypeptide having sequence identity to amino acid sequence of P30 antigen of Toxoplasma gondii e.g. Toxo30de13C, Toxo30de12C, Toxo230de12C, Toxo230de12C, antibodies to Toxoplasma gondii.

                                                                                                                                                                                                                   The invention relates to a purified P30 antigen (1) chosen from 3 fully defined Toxo30de12C and ToxoP30 MIX1 sequences, having 1-6 amino acids added to the C-terminus of the amino acid sequence of Toxo30de12C P30 antigen sequence, or comprising an amino acid sequence in which at least one of the five C-terminal cysteine amino acids of the amino acid sequence of Toxo30de13C P30 antigen sequence in substituted with alanine, or comprising the amino acid sequence chosen from MBP-Toxo30de13C(52-300aa), MBP-Toxo30de14C(52-29aa) and MBP-ToxO30MIX1 fusion proteins. (1) is useful for detecting the presence of IGM antibodies to Toxoplasma gondii in a test sample, which involves contacting the test sample suspected of containing the IGM antibodies with a composition comprising (1) and detecting the presence of (1)/IGM antibody complexes. The present sequence represents DNA encoding a MBP-ToxoP30 fusion protein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   360
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               540

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention relates to a purified P30 antigen (I) chosen from 3 fully defined Toxo30del3C, Toxo30del2C and ToxoP30 MIX1 sequences, having 1-6 amino acids added to the C-terminus of the amino acid sequence of Toxo30del2C P30 antigen sequence, or comprising an amino acid sequence in which at least one of the five C-terminal cysteine amino acids of the amino acid sequence of Toxo30del3C P30 antigen sequence is substituted with alamine, or comprising the amino acid sequence of Foxo30del3C P30 antigen sequence of Substituted with alamine, or comprising the amino acid sequence chosen from MBP-Toxo30del3C P32-294aa) and MBP-Toxo30MIX1 fusion proteins (I) is useful for detecting the presence of IgM antibodies to Toxoplasma gondii in a test sample, which involves contacting the test sample suspected of containing the IgM antibodies with a composition comprising (I) and detecting the presence of (I)/IgM antibody complexes. The present sequence represents DNA encoding a MBP-ToxoP30 fusion protein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             180

XX XX Maine GT, Patel CB, Ginsburg SR, Bliese TR;	XX XXX XXX XXX XXXXXXXXXXXXXXXXXXXXXXX	Example 5; Fig 35; 114pp; English.  XX  XX  XX  XX  The invention relates to a purified P30 antigen (I) chosen from 3 fully defined Toxo30de13C, Toxo30de12C and ToxoP30 MIX1 sequences, having 1-6 amino acids added to the C-terminus of the amino acid sequence of Toxo30de12C P30 antigen sequence, or comprising an amino acid sequence in which at least one of the five C-terminal cysteine amino acids of the CC amino acid sequence of Toxo30de13C P30 antigen sequence is substituted compine acid sequence of Toxo30de13C P30 antigen sequence is substituted compine acid sequence Chosen from MBP-CC with alanine, or comprising the amino acid sequence chosen from MBP-CC Toxo30de13C(52-304aa) and MBP-Toxo30MIX1  CC fusion proteins. (I) is useful for detecting the presence of IgM

                                                                                                                                                                 9
antibodies to Toxoplasma gondii in a test sample, which involves contacting the test sample suspected of containing the IgM antibodies with a composition comprising (I) and detecting the presence of (I)/IgM antibody complexes. The present sequence represents DNA encoding a MBP-Toxop30 fusion protein of the invention.
